WORBLA'S black Art

Pavy Creations shows us that it is possible to create fantastic figurines using **Worbla's® Black Art (WBA)**. She made Blossom, one of the three superheroines from „The Powerpuff Girls“, completely out of **WBA**.

The base was done using aluminum foil and then it was covered and sculpted with **Worbla's® Black Art**. To completely smooth out the **Worbla's® Black Art's** surface, she used the black Gesso Spray from **Pébéo**. It dries rapidly and leaves a perfect black matt finish. In addition it improves the adhesion of paint to the surface.

Did you find some small irregularities, holes or dents? Don't panic! Using the spray Gesso you can easily fix it.

Finally, the cute superheroine was painted with the richly pigmented **Pébéo Studio Acrylics** colors.

Would you like to know more about it? blog.Cast4Art.de

Erza Cosplay's phenomenal Sagittarius proves that with **Worbla's® Black Art** there is absolutely no limit to your creativity!

The bracelet and the entire armor are made out of **WBA**. To achieve this breathtaking golden-effect, gilding waxes from **Pébéo** were used.

First of all she primed the whole armor with a coat of wood glue and then she painted everything with **Pébéo Studio Acrylics** "Black" and "Red Earth".

Using a brush, she applied the gilding wax in the color "King's Gold" over the armor. A piece of advice:

Don't forget to add highlights and shadows to your armor for a great 3D effect and to add expressiveness to your work.

Finally use a varnish spray for a great finish and to protect your work.
